

INDUSTRIAL INTERNSHIP REPORT

Project: Student Registration System

Submitted By

Padimala Sowmya

Roll No: 24M61A05G8

B.Tech CSE 3rd Year

Swarna Bharathi Institute of Science & Technology, Khammam

Executive Summary

This report presents the work completed during the Full-Stack Development Internship conducted by upskill Campus in collaboration with UniConverge Technologies Pvt. Ltd. The project, Student Registration System, was developed using HTML, CSS, and JavaScript. It enables users to register student details, validates user input, and displays records through a simple web interface. The internship improved my practical knowledge of web development, GitHub, debugging, documentation, and software development practices.

Preface

This internship bridged the gap between academic learning and industry expectations. Over six weeks, I planned, designed, developed, tested, and documented a Student Registration System while learning professional development practices and teamwork.

Introduction

UniConverge Technologies Pvt. Ltd. and upskill Campus organized this internship to provide practical industry exposure. The internship focused on project-based learning and software development skills.

Problem Statement

Manual student registration is slow, error-prone, and difficult to manage. The objective of this project is to provide a simple digital solution for registering and maintaining student information.

Existing and Proposed Solution

Existing systems rely on paper records or spreadsheets. The proposed Student Registration System provides a user-friendly web interface with input validation and organized record management.

GitHub Repository:

<https://github.com/sowmyapadimala-crypto/upskillcampus>

System Design

Workflow: User → Enter Student Details → Validate Input → Display Student Records.

Technologies Used: HTML, CSS, JavaScript.

Testing

The application was tested with valid and invalid inputs. Form validation worked correctly and student records were displayed successfully.

My Learnings

I learned HTML, CSS, JavaScript, GitHub, debugging, frontend development, project documentation, and the importance of software testing and version control.

Future Scope

Future improvements include database integration, user authentication, edit/delete functionality, search features, and cloud deployment.

Conclusion

The internship enhanced my technical skills and confidence in developing web applications. It provided valuable practical experience that will support my future career in software development.
